

Defense	Base Cost (Lvl 1)	Lvl 2 Upgrade	Lvl 3 Upgrade	Value Proposition & Reasoning
MFA	\$150,000	+\$100,000	+\$150,000	Extremely Versatile. Defends against Account Takeover, Phishing, Brute-Force. A must-have core defense, hence the high price.
Regulated Automated Backups	\$120,000	+\$80,000	N/A	Critical Recovery. Doesn't prevent attacks but neutralizes Ransomware, one of the most costly attacks. High base cost.
Email Filtering	\$80,000	+\$50,000	+\$70,000	First Line of Defense. Stops the primary vector for Phishing and BEC. Very high value for money at base level.
Segregation of Duties	\$75,000	+\$40,000	+\$65,000	Powerful & Cheap. Amazing effectiveness against Insider Fraud and BEC for a relatively low policy-based cost.
DDoS Protection	\$150,000	+\$125,000	+\$175,000	Specialized & Expensive. Mitigates a high-impact attack that can shut down all online services. Niche but critical.
Principle of Least Privilege	\$60,000	+\$35,000	+\$55,000	Foundational. Complements Segregation of Duties. Cheap and effective against insider threats.
HTTPS and Encryption	\$100,000	N/A	N/A	Non-Negotiable Foundation. Baseline for protecting data in transit
Verification Protocols	\$90,000	+\$60,000	+\$90,000	High-Impact. Directly stops high-value fraud like APP and sophisticated BEC. Very valuable.
Network Monitoring	\$110,000	+\$70,000	+\$110,000	Broad Visibility. Detects a wide range of active attacks (Cryptojacking, DDoS, Bruteforce). Priced as a premium tool.
Application Sandboxing	\$130,000	+\$85,000	+\$120,000	Advanced Threat Containment. Specialized defense against Zero-Days and Ransomware. High cost for high protection.
Background Checks	\$50,000	+\$30,000	+\$40,000	Proactive & Cheap. A relatively inexpensive way to significantly reduce Insider Fraud risk from the start.
User Education	\$40,000	+\$25,000	+\$35,000	Cheap but Unreliable. The human firewall is cheap to implement but not perfectly effective. A budget option.
Input Validation	\$70,000	+\$45,000	+\$65,000	Technical Foundation. Crucial for preventing web attacks. Moderately priced as it's a standard dev practice.
Keep Software Updated	\$45,000	+\$30,000	+\$40,000	Basic. Cheap and effective, but often overlooked. A cost-effective way to reduce

Defense	Base Cost (Lvl 1)	Lvl 2 Upgrade	Lvl 3 Upgrade	Value Proposition & Reasoning
				risk.
Traffic Filtering	\$65,000	+\$40,000	N/A	Good Value. Provides decent protection against DDoS and Bruteforce for a mid-tier price.
ATM Inspections	\$55,000	+\$35,000	+\$50,000	Specialized Physical Defense. Only protects against one threat, but that threat is common. Mid-tier cost.
Deepfake Detection	\$95,000	+\$65,000	+\$95,000	Niche but Potent. Defends against a complex, emerging threat. High cost due to its advanced, specialized nature.
Regular Audits	\$60,000	+\$35,000	+\$50,000	Strong Deterrent. Effective policy control against fraud. Priced similarly to other policy tools like SoD.
VPN Usage	\$30,000	N/A	N/A	Binary & Cheap. Simple, effective defense against MITM. No upgrades needed, just a flat fee.
Password Policies (Regular Password Changes – should be changed to this)	\$20,000	+\$15,000	+\$25,000	Basic & Cheap. The absolute baseline of security. Very low cost, but also low effectiveness on its own.
